Project Proposal Year IV

Student Name:	Liam Treacy	Student Number:	C00298242
Working Title:	"Oisín's Odyssey"		
Description:	Oisín's Odyssey, will be a 3D Platforming game, created in the UPBGE Engine, using Python Programming, with Xbox controller support. The game will be played from a 3rd person perspective and be controlled with an Xbox controller. The story of the game will be about a young man named Oisín Martin, a 21-year-old Orphan who is living out by myself in the town of Strackland, in the fictional country of Alba. Stackland was once a normal, bustling city, however Stackland was hit by a series of attacks, although there was little casualty, Oisín lost both of his parents, leaving him orphaned, almost every other resident left to get a new life, and why would they stay? The attacks left a city which was once proud and tall, abandoned, however Oisín still stays as he is rather a hermit and prefers to be alone. This all changes one day when he receives a note to his exact address saying that someone will be there to kill him. This concerns him and he decides, it's time to go. The player will be given a choice to stay or began their journey out of Stackland. If the play chooses to stay, a cutscene will play where an assassin comes in and kills Oisín, the game will then restart. If the player chooses to leave, the game will begin. Oisín lives in a rundown town which is virtually abandoned of all human life, because of this, he has become rather handy. He knows about killing animals for food and learning how to fend for himself. This will impact the game mechanics, Oisín will have to use weapons to attack and defend himself from enemies such as rats add rabid dogs, or sneak around potentially inactivated bombs. The game will consist of roughly 3 stages, Stackland Ruins, Tropical Swamp and Crystal Stalactites Sanctuary. The idea is that each stage is slowly more civilised and like our modern world, Stackland Ruins will have fire and destruction. After the final stage will be what we see as normal every day life, to Hank it is a utopia, green grass and blue skies. I would also like to have a boss battle on stage 3, the final hurdle between Oisín and a life of normality. The ending will have Oisín on a cliff side relaxing with a bottle of beer, watching the sun set on his new life. The game will feature 3D models and environments, I will create this in Blender and Maya. but also 2D illustrated cutscenes, I want these to be greater than the sum of their parts, they will give the game some style and also let me show off my 2D art. This I

	hope will help the game hopefully stand out for the right reasons. I will attach links to games I feel accomplish this well below.
Reasons for selecting project:	I want to create a project that will hopefully impress people, and put my skills to the test, I want to step out of my comfort zone, however not to an unrealistic degree and still be able to know what I am talking about. During my placement in ESB, I worked with Blender so I want to try use my new skills to create a project that will leave an impact and look good on my CV. Muhammad also mentioned our project will follow us for life, so I want this to be as good as it can. I was also told to check out UPBGE, so I want to try learn a new skill, I will improve my python and be able to very component with Python Programming. The mix of technologies will also give me some real creative freedom. Alba will be a gritty unkept place so I can make Blender models with rough and decrypted textures. I also have been trying to improve my art skills, so I want to use this as a chance to make assets for the game and have much better art, I like to think I have improved since 1st year of drawing so this will be the test. Lastly I enjoy writing, I would like a dialogue heavy game which can show off a character and his/her's personality. Oisin will have a voice, likely by me, but I may reach out to friends if they would like to have a role, however I understand that this may breach the rules of project so if that is the case I will voice each character, but hopefully I can include friends to have their voices be heard.

Hardware requirements:	Steady Internet Connection Xbox Series S Controller (Owned) Microphone (Owned) Personal Laptop

Interactive Digital Art and Design SE608

Project Proposal Year IV

	D428 PC Huion Drawing Tablet (Owned)
Software requirements:	UPBGE Blender Maya? (Potentially but not a guarantee) Adobe Photoshop (Potentially, since this is unavailable on Linux) Sketchbook Pro (Available on my personal computer) Asperite (Maybe but not 100% sure) Github Github Desktop
Other requirements:	No other requirements needed
Action Taken:	Change Engine from Unity/C# to UPBGE and Python. Investigate UPBGE: Making the game entirely in Blender has numerous benefits, including a clean work station, python programming, instant testing for the game, this will help me fix problems quickly. It also supports rigid bodies which I used in Unity. Define core gameplay Distinguish core gameplay from optional content
