Project Proposal Year IV

Student Name:	Liam Treacy	Student Number:	c00298242
Working Title:	“Hank’s Odyssey”		
Description:	Hanks’s Odyssey, will be a 3D adventure game, created in the Unity Engine, with Xbox controller support. The story of the game will be about a young man named Henry “Hank” Quincy, a 23 year old Orphan who is living out by myself in the town of Strackland, in the fictional country of Alba. Stackland was hit by a serious of attacks which left it abandoned, however Hank still stays as he hates people and wants to live out his life as a hermit. This all changes one day when he recieves a note to his exact address saying that someone will be there to kill him. Hank has 2 choices, run or stay and wait to be killed. The player will be given a choice to stay or began their journey out of Stackland. Hank lives in a rundown town which is virtually abandoned of all human life, because of this, he has become rather handy. He knows about killing animals for food and learning how to fend for himself. This will impact the game mechanics, Hank will have to use weapons to attack and defend himself or sneak around potentially inactivated bombs. The game will consist of roughly 5 stages, the game will begin with a choice if they want to wait and if they do, they will get shot and killed. If they do decide to proceed on their journey, each stage will slowly have increased life, until the final stage will be what we see as normal every day life, to Hank it is a utopia. I would also like to have a boss battle on stage 4, the final hurdle between Hank and a life of normality. The ending will have Hank on a cliff side relaxing with a bottle of beer, watching the sun set on his new life The game will feature 3D models and environments but also 2D illustrated cutscenes, to help the game hopefully stand out for the right reasons. I will attach links to games I feel accomplish this well below.		
Reasons for selecting project:	I want to create a project that will hopefully impress people, and put my skills to the test, I want to step out of my comfort zone, however not to an unrealistic degree and still be able to know what I am talking about. During my placement in ESB, I worked with both Unity and Blender so I want to

	try use my new skills to create a project that will leave an impact and look good on my CV. The mix of technologies will also give me some real creative freedom. Alba will be a gritty unkept place so I can make Blender models with rough and decrypted textures. I also have been trying to improve my art skills, so I want to use this as a chance to make assets for the game and have much better art, I like to think I have improved since 1st year of drawing so this will be the test. Lastly I enjoy writing, I would like a dialogue heavy game which can show off a character and his/her's personality. Hank will have a voice, likely by me, but I may reach out to friends if they would like to have a role, however I understand that this may breach the rules of project so if that is the case I will voice each character.
